GAULON Debuts 2025 Pantone Colored Charger

5-in-1 Charging Station Now Comes in “Mocha Mousse”

St. Paul, Minn: GAULON’s 5-in-1 charging station now comes in “Mocha Mousse,” Pantone’s 2025 Color of the Year. The rich, dark brown tone blends with modern home décor and aesthetics, offering a sophisticated twist on everyday tech. “Mocha Mousse” marks the brand’s first Pantone-inspired release.

This best-selling device powers iPhones, Apple Watches, AirPods, iPads, and more. The station is MagSafe compatible and designed for fast, efficient charging. Its compact design cuts clutter and runs on a single outlet, making it ideal for small spaces, desktops, nightstands, or travel.

The charging station was previously only available in classic white, black, and pink colorways. The introduction of “Mocha Mousse” is the first step in GAULON’s broader color expansion process. “We’ve never done a color like this,” said CEO Emma Gaulon. “Mocha Mousse felt like the perfect start to a new tradition.” This bold move into a color-led product design offers fresh options for their loyal customer base.

The original “trifecta” of colors has laid the foundation for the company’s success. However, as GAULON continues to grow, it now has the bandwidth to produce a wider variety of colorways. This expansion will allow the brand to reach new audiences and cater to a more diverse audience of consumers.

This limited-edition color will be available through the end of 2025. GAULON plans to make this an annual tradition, launching a new charger for each future Pantone Color of the Year.

About GAULON: A female-founded technology company based in St. Paul, Minn. GAUOLN creates various tech accessories, such as charging stations, durable cases, and high-quality watch bands. GAUOLN is dedicated to elevating your tech experience with sleek and innovative accessories compatible with Apple devices.

Journalist Pitch:

Zoe Kleinman- BBC News

Zoe Kleinman is a British technology journalist and the BBC's first Technology Editor. She primarily focuses on technological trends and the impacts of technology on society.

<https://www.bbc.com/news/articles/c7858w2yj75o>

Companies and support groups for women in STEM are facing serious funding challenges as shrinking corporate and federal budgets, especially in relation to DEI. Prominent initiatives like “Women Who Code” and “Girls in Tech” have already been forced to shut down, with many others at risk of the same.

<https://www.bbc.com/news/technology-37605943>

This article touches on the positive outcomes of having more female representation in the tech industry. Female voices in development would help eliminate biases in a wide variety of technology such as period tracking apps, voice recognition, and overall product design.

SUBJECT LINE: How GAUOLN’s new campaign empowers women in tech.

Dear Zoe,

I really enjoyed your recent article highlighting the reduction in funding for initiatives supporting women in STEM fields. It sheds light on an important issue, which is often overlooked in today's society.

Considering declining DEI funding and reduced support for women in STEM, GAUOLN has launched a new campaign. The initiative aims to help mitigate the negative effects of these events.

GAUOLN's "Charge Your Ambition" campaign amplifies the stories of driven women in the business and tech industry. We share stories of ways real women stay connected and empowered using our 5-in-1 charging station. With a strong focus on female empowerment, the campaign celebrates the ambition and resilience of women in male dominated fields.

Given your strong voice in the tech community and your advocacy for women in STEM, we believe you'd be the ideal journalist to cover this campaign. You'd also have the opportunity to connect directly with our CEO, Emma Gauoln, for deeper insight into the vision behind the business.

If you are interested in learning more about this campaign, please feel free to contact me directly. I'd be happy to coordinate a meeting with Emma or provide any additional details you may need.

Thank you for your consideration,

Alayna Rund

Head of Public Relations: GAUOLN tech.

This article would likely be in the technology section of a newspaper or online journal.

Tech Needs Women, Now More Than Ever

Only 4.8 percent of the top 150 companies in Silicon Valley were led by women at the end of 2020, as stated by the [New York Times](#). although there has been progress in the number of women leading tech companies, the pace of change remains incredibly slow. With minimal overall progress, it raises serious questions about the industry's commitment to diversity in leadership. Now more than ever, we need to actively recruit more women into the tech industry and provide adequate funding for programs in support of women in STEM.

Supporters of the recent Diversity, Equity, and Inclusion rollbacks may argue that hiring decisions should be made on professional experience alone, regardless of gender identity. However, the reality is that women are underrepresented in the technological space, despite being equally qualified to their male counterparts.

“Women in 2020 occupied just 24% of all tech jobs, with the largest gender gaps in professions such as software development, cybersecurity and data science. Women also fill fewer than 20% of senior leadership roles.” Said [Alison Bell](#), a journalist for the Indianapolis Business Journal. In that same article, Bell states that companies with higher gender and ethnic diversity are 35% more likely to have higher profit margins than their competitors. Despite this statistic, women in tech earn less on average than men in the same roles.

In addition to financial benefits, increasing the number of women in tech brings significant technical advantages. According to technology reporter [Zoe Kleinman](#), a more inclusive tech industry could drive a wider range of innovations. Voice recognition software could better understand female voices. We may see health apps that address a wider

range of women's needs, such as menstrual tracking rather than just fertility. There is also a strong likelihood of improved cybersecurity measures.

The lack of women in tech is not just a social issue but also an economic one. Gender equality in STEM is still vulnerable and in danger, despite years of advancement. "Groups supporting women in science, technology, engineering and math (Stem) fields are struggling to survive as corporations' shrinking budgets, and cultural changes, see diversity strategies take a back seat." Says the [British Broadcasting Corporation](#).

In order to support the expansion of women in tech, we need to increase outsourced funding for female STEM programs. These programs offer essential support and guidance to women pursuing careers in STEM. According to the [American Society for Microbiology](#), the mentorship present within a female-focused STEM program plays a vital role in both professional and personal development. This is particularly evident in STEM fields, where mentorship has been instrumental in increasing women's participation and representation, highlighting its importance as a strategy to bridge the gender gap.

As time progresses, our society's technological capabilities continue to advance. With more opportunities in tech, we have a greater responsibility to equally represent the diverse population that both uses and contributes to these innovations. Supporting women in a rapidly evolving field is not just equitable, but also extremely necessary for continued progress. Through inclusive hiring practices and increased funding for programs that support women in STEM, we can create a version of Silicon Valley that accurately reflects the diversity of its consumers.
